

Web 2.0 Portal Architecture

The Web 2.0 enterprise portal integrates all functionality of a company's web sites and provides a uniform, central access point to both the internet and extranet via a single login (Single Sign-On). Qualysoft has at its disposal an energetic team of Web 2.0 experts in its Qualysoft Web 2.0 Lab. Web 2.0 innovations and new technological trends on platforms such as YouTube, flickr, del.icio.us, Facebook and MySpace are continuously monitored and tested. Qualysoft itself is an operator of successful social community sites, where Web 2.0 technologies are selected and deployed from the perspective of our own requirements. The Web 2.0 lab evaluates how innovations in the area of enterprise portals can best be transferred. Profit from our enterprise Web 2.0 know-how and increase the attractiveness of your web site.

Quality Standard

The total quality assurance of the project is ensured through MSZ EN ISO 9001:2001.
